

ZEUS **BAAS**

METCLOUD'S EXCLUSIVE
BACKUP AS A SERVICE (BAAS)

ZEUS is for organisations that need a secure business IT infrastructure, a robust backup and disaster recovery capability.

METCLOUD's award winning Infrastructure as a Service (IaaS) provides an organisation with secure, scalable computing, storage, and networking resources on demand.

ZEUS is an exclusive back up and Disaster Recovery (DR) service for organisations that reside in METCLOUD's IaaS.

It is also for organisations that demand system availability 24/7.

Data is crucial to keep your organisation moving, when employees or customers cannot access the applications they need, effects can be detrimental. Brand damage, employee productivity, and unforeseen expenses are unwanted and unneeded headaches that come when your business encounters unplanned downtime.

With a rise of workloads moving to multi-cloud ecosystems and employees still working remotely, data is becoming harder to manage and control than ever before.

Legacy backup solutions create more operational costs and need specific expertise to manage, this is not what you need in today's 24/7 business. A few challenges that most businesses face when it comes to ensuring modern backup:

- ✓ Unable to meet business expectations due to slow backups and time-consuming recovery processes
- ✓ Uncertainty that data is safe due to unknown backup or infrastructure failures
- ✓ Frustration with wasted manpower trying to manage complex and inflexible legacy systems
- ✓ Vendor lock-in making it difficult to expand and grow with the business demands

ZEUS addresses the next generation operational challenges head-on, with a comprehensive set of enterprise-grade data protection capabilities.

We deliver dependable availability across all cloud, virtual and physical workloads with a simple, flexible, and reliable solution. ZEUS will protect your data no matter the location or workload type, using powerful backup and instant recovery options.

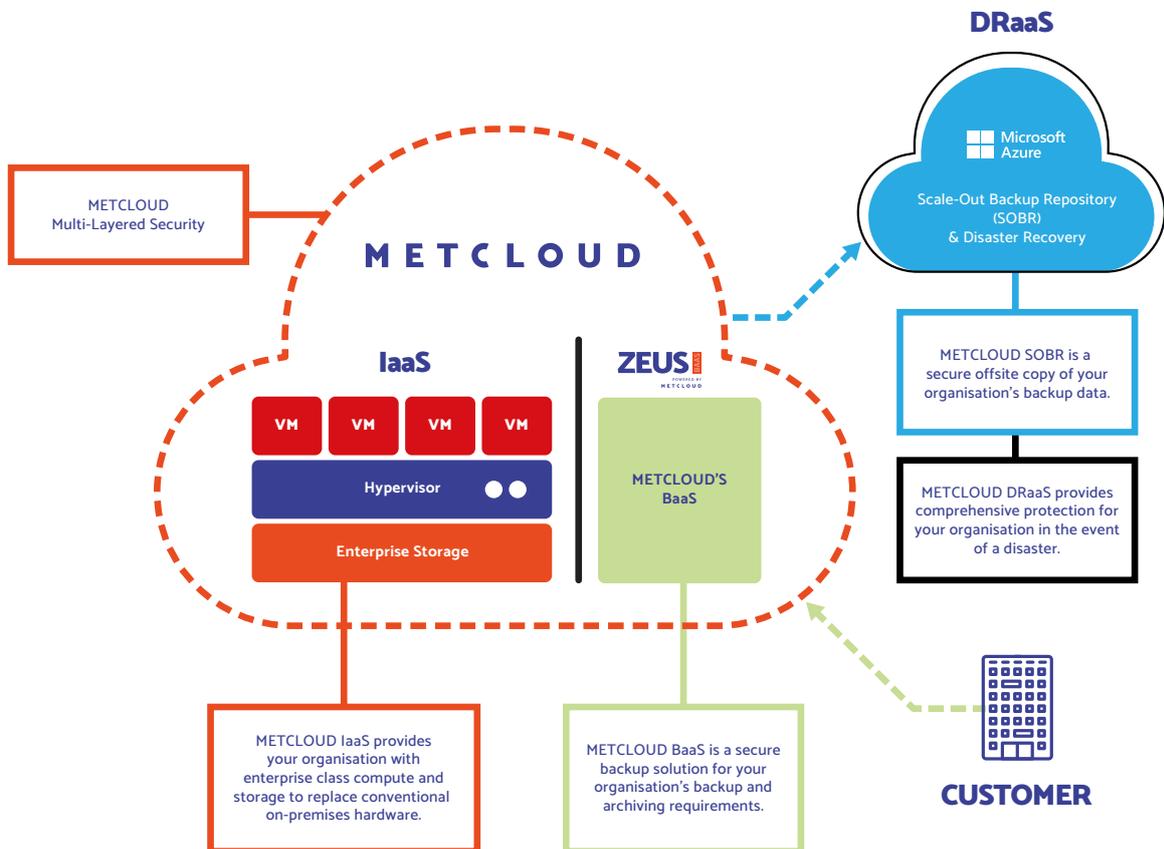

Do not compromise. Scale confidently to meet your business needs.

HOW IT WORKS

- Fully Managed Service
- Ransomware Protection
- Superior Backup Speeds
- Encrypted Backups
- Flexible Data Retention
- Instant Server Recovery
- Subscription Based Pricing
- Microsoft Azure Offload for additional resilience
- Daily Backup Reports

Why METCLOUD?

Award winning company for cybersecurity, innovation, and excellence. Our vision is to be the global brand of choice for next generation cybersecure cloud services.

Our services have been architected with security by design. Ransomware, Cloud vulnerabilities, Phishing attacks Social engineering and vulnerability management are the five top global security threats. METCLOUD's portfolio of cyber security and cloud services will ensure that you protect, defend, and mitigate any potential cyber attack irrespective of how it was carried out.
